Profile

Computer Engineering MSc student (AI & Data Analytics) with industry experience training, fine-tuning and evaluating large language models at [Nebuly](#), where I turned raw LLM conversations into product decisions. Comfortable taking a system from model to production, and a long track record of shipping software people actually use.

Skills

ML	LLM fine-tuning & evaluation, Single GPU & Multi-GPU, RAG, agents (MCP), PyTorch, computer vision (YOLO)	Languages	Python, Java, TypeScript, JavaScript, Rust, C, Dart
Cloud	GCP (Vertex AI, Cloud Run, Cloud Build), AWS, Azure	Database	PostgreSQL, MySQL, MongoDB, ClickHouse
		Big Data	Apache Spark, Hadoop
		Testing	Pytest, JUnit, Playwright, Linters (Ruff, Black, Bandit)

Experience

Nebuly AI <i>AI Engineer</i>	Oct 2025 – Apr 2026
– Improved internal NLP systems over the previous baseline by fine-tuning and evaluating large language models on Vertex AI, curating task-specific datasets and running multi-GPU training jobs. – Surfaced recurring usage patterns and failure modes at scale by building automated analysis models over customer LLM–user conversations, turning raw transcripts into product decisions.	
Politecnico di Torino <i>Teaching Assistant (Object Oriented Programming in Java; Computer Science in Python)</i>	Oct 2023 – Feb 2025
– Prepared 100+ students per course across two teaching semesters, by walking through past exam problems, reviewing their code line by line and rebuilding the course material into guided problem-solving sessions.	
KPMG Italy <i>Data Scientist Intern</i>	Apr 2024 – Jun 2024
– Ranked suppliers by reliability for the procurement team by applying statistical analysis to historical purchasing data, replacing a manual, case-by-case assessment. – Delivered a supplier recommendation tool and a Power BI dashboard that gave stakeholders a single view of the most critical suppliers and of the choices to make on them.	
Novaverse (Startup) <i>Founding Partner & Head Developer</i>	Jan 2022 – Present
– Made releases repeatable across the network by standardizing 30+ custom Java plugins onto a shared build pipeline, a unified API layer and a single versioning convention. – Kept infrastructure spend predictable by planning capacity and prioritizing work across parallel projects against the network's actual load. – Improved application performance by profiling hot paths and removing bottlenecks in the most used services.	

Education

Politecnico di Torino <i>Master of Science in Computer Engineering (AI & Data Analytics)</i>	Sep 2024 – Expected Sep 2027
– Key courses: Big Data Processing and Analytics, Data Science and Database Technologies, Software Engineering, Machine Learning and Pattern Recognition, Advanced Machine Learning, Web Applications I.	
Politecnico di Torino <i>Bachelor of Science in Computer Engineering</i>	Sep 2021 – Sep 2024
– Score: 109/110, Final Topic: Computer Networks (RSA Cryptography) – Key courses: Data Structures and Algorithms, Operating Systems, Computer Networks, Databases, Object-Oriented Programming, Computer Architectures, Applied Electronics, Automatic Control.	

Projects

(Open source) Verdica

<https://github.com/verdicahq/verdica>

- A GitHub Action that enforces a team's recorded architecture decisions on every pull request: a deterministic path-scope match selects the governing decisions, and an LLM judge runs only on a scope hit to decide whether the diff contradicts them.
- Benchmarked 6 LLM judges on 42 real (decision, diff, outcome) pairs mined from public repositories, gating every change to the judge on high-confidence precision, which reaches 0.80 with the best model.

6D Object Pose Estimation

<https://github.com/AlbeMiglio/AML>

- Reached 95.1% ADD accuracy on 6D object pose estimation, recovering full rotation and translation of objects from RGB input.
- Rebuilt the evaluation protocol after finding train/test leakage in the original split, making the reported result reproducible.

(Open source) ipcam-protocol

<https://github.com/AlbeMiglio/ipcam-protocol>

- Reverse-engineered the undocumented P2P protocol of consumer IP cameras from captured traffic, then reimplemented client and server from scratch.
- Runs self-hosted in production: live video, recordings, two-way audio and camera control, with no dependency on the manufacturer's app or cloud.

(Open source) Keyword

<https://github.com/AlbeMiglio/keyword>

- Intercepts API keys pasted into an AI coding assistant before they reach the model, stores them in permission-restricted files and re-submits a sanitized prompt.

(Closed-source) Nyx

<https://builtbybit.com/resources/18731>

- A Java plugin for Minecraft networks that grants access to the servers from both official and unofficial accounts.
- Sold to approximately 400 customers, with Ed25519-signed licensing and automated fulfilment across two marketplaces.

Other open source

- [PowerLib](#) — cross-platform Java library for Minecraft plugin development.
- [WhatsRust](#) — Rust client-server messaging application with offline delivery.
